

## Answers

Question 1.1: alc command doesn't work. Because bash: alias: alc: not found.

Question 1.2: alc work because we use command source .bashrc .

Question 1.3: alc command does work because we already save alias alc='./[allcount.sh](#)' in the vim .bashrc and run the command source .bashrc so it will work forever.

**Source = Restart new terminal**

Question 2.1: mlc doesn't work because we changed the name from mlc to itworks so mlc file is the unknown file .

Question 2.2: it does work because the itworks file that we changed so it works file possible to run.
